## Learning Outcomes

During the Clinical Clerkship in Ophthalmology, students will remain in specific units of the Ophthalmology Department and will observe the activities of specialized doctors so that the former acquire clinical skills that will help them diagnose and treat ophthalmic diseases, especially if they do not intend to follow the specialty of Ophthalmology in the future.

These skills cover the basic sub-specialties of Ophthalmology with emphasis on dealing with emergencies in the primary care setting as well as diagnosing serious clinical conditions that pose a threat to the eyesight or life of patients.

## Course Content

Indicatively, these skills include:

1. Conducting visual acuity test
2. Confrontation visual field exam
3. Cover-uncover test
4. Digital ocular palpation
5. Eversion of upper eyelid
6. Direct ophthalmoscopy with emphasis on the identification of optic nerve pathology
7. Ocular lavage
8. Elementary use of slit lamp
9. Use of fluorescein for examination of ocular surface
10. Palpation of temporal artery
TEACHING METHOD.
Observing clinical and surgical activities in the Ophthalmology Clinic at PAGNI University Hospital for 10 (ten) working days

STUDENT ASSESSMENT
Oral examination
